

SAFE EMPTYING OF DRICON MULTI-TRIP BAGS BULK BAGS

Please read below and follow these safety instructions:

- Remove all packaging from the bag and pallet.
- Visually inspect the bag for any visible damage particularly any rips, tears or major frays in the lifting strops. **If these strops are damaged - DO NOT TRY TO LIFT THE BAG.**
- Raise the bag from the pallet. If you are using a **forklift**, ensure the mast is tilted slightly back and the lifting eyes are spaced evenly on both forks (2 strops per fork). If you are using a **Hiab** or **Overhead crane**, a closed hook **must** be used.

Strops evenly spaced on forks

- Un-tuck the spout cover flap on the bottom of the bag.
- Pull the spout nozzle clear.
- Untie the spout string to let the product flow. If the spout is left partially tied the flow rate of the product can be controlled.
- Product flow can be increased by loosening the rope on the bottom of the bag. Always **UNTIE** the bottom rope as cutting can lead to damage to the base and spout area of the bag.

CAUTION: Never stand under a suspended bulk bag ALWAYS untie and operate from one side.
