

# Introducing the High Strength Range

**NEW**  
product

# A High Strength product for any job.

NEW product

The High Strength range of products are designed to meet the needs of any project where high strength is important. These pre-mixed products contain the correct proportions of ingredients ensuring that the required MPa is reached. They are suitable for both commercial and domestic purposes.

## High Strength HandiCrete®

High Strength HandiCrete® is a dry scientifically designed high strength concrete mix that suits the needs of civil, commercial and construction applications. High Strength HandiCrete is formulated to reach a target strength of 40MPa in 28 days and is suitable for general structural uses where high strength is a requirement.

### Ideal for:

- Foundations, Block Fill, Heavy Duty Paths, Bridge Repair Work, Bollards.

## High Strength RapidSet™

High Strength RapidSet™ 30MPa posthole concrete is a dry concrete mix with special additives that will harden in 15 minutes at 21° Celsius (warmer temperatures give faster setting times, colder temperatures give slower setting times) and is formulated to reach a target strength of 30MPa in 28 days. High Strength RapidSet will save you time and effort with any application. It is not recommended where a smooth trowel finish is required.

### Ideal for:

- Foundations, Structural Applications, Heavy Duty Fencing, Retaining Walls, Larger Washing Lines and Sun Sail Posts.

## SuperSet™

SuperSet™ mortar is a shrinkage compensated dry blend of cements, additives and sands formulated for applications requiring a quick set and the development of high early strength. SuperSet is formulated to reach a target strength of 12MPa after 2 hours and 60+MPa in 28 days. Full application information is provided with the SuperSet pail.

### Ideal for:

- Fixing pedestals, hinge pins, refixing pipes, plugging and grouting, empty water tank repairs, repair work when limited time is available to complete the job, raising manhole lids in roadways, patch repairs to factory floors, roadway kerbing repair, preparing floors for carpet laying, tilt slab jointing, gully trap installation, water meter box installation.
