**Safety Data Sheet** 

### 1. Identification of Substance & Company

#### **Product**

Product name Dricon Construction Grout

Products included in this SDS: NA
Product code NA

HSNO approval HSR002545

Approval description Construction Products (Carcinogenic) Group Standard 2020

UN number Not allocated

Proper Shipping Name NA
DG Class NA
Packaging group NA
Hazchem code NA

**Uses** Gap filling grout for concrete foundations.

### **Company Details**

Company Dricon Firth Industries

Address

810 Great South Road
PO Box 14534
Penrose
Panmure
Auckland, 1060
Auckland, 1741
New Zealand
New Zealand

 Telephone
 +64-9- 583 2121

 Website
 www.dricon.co.nz

**Emergency Telephone Number: 0800-764 766** 

## 2. Hazard Identification

### **Approval**

This product is an approved substance under the Hazardous Substances and New Organisms Act (HSNO, Approval HSR002545). The substance has been classified as hazardous according to the criteria in the Hazardous Substances (Hazard Classification) Notice 2020.

## Classes

#### **Hazard Statement**

Skin irritation cat 2 H315 - Causes skin irritation.

Eye damage cat 1 H318 - Causes serious eye damage.

Carcinogenicity cat 1 H350 - May cause cancer if inhaled (contains crystalline silica)

STOT\* RE cat 1 H372 - Causes damage to organs through prolonged or repeated exposure

if inhaled. (may cause silicosis and effects to the lungs).

\*STOT – system target organ toxicity **SYMBOLS** 

## **DANGER**

#### Other Classifications

There are no other classifications that are known to apply.

## **Precautionary Statements**

**Prevention** P102 - Keep out of reach of children.

P103 - Read label before use.

P201 - Obtain special instructions before use.

P202 - Do not handle until all safety precautions have been read and understood.

P260 - Do not breathe dust.

P264 - Wash hands thoroughly after handling.

P270 - Do not eat, drink or smoke when using this product.

P273 - Avoid release to the environment.

P280 - Wear protective gloves/eye protection/face protection\*.

P281 - Use personal protective equipment as required.

**Response** P101 - If medical advice is needed, have product container or label at hand.

P308+P313 - IF exposed or concerned: Get medical advice/ attention. P302+P352 - IF ON SKIN: Wash with plenty of soap and water. P332+P313 - If skin irritation occurs: Get medical advice/ attention.

P332+P313 - If skin irritation occurs: Get medical advice/ attention P362 - Take off contaminated clothing and wash before re-use.

P305+P351+P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses,

if present and easy to do. Continue rinsing.

P310 - Immediately call a POISON CENTRE or doctor/physician.

Storage P405 - Store locked up.

**Disposal** P501 - Dispose of contents/container in accordance with local/regional/national/international regulation.

## 3. Composition / Information on Ingredients

Component	CAS/ Identification	Conc (%)
Cement	65997-15-1	30-40%
Chemical additives including DENKA CSA	Mixture	1-5%
Ingredients not contributing to GHS classes	Mixture	balance

Component of CEMENT	CAS/ Identification	Conc (%)
Tri calcium silicate	12168-85-3	42–70
Di calcium silicate	1003-77-2	15–30
Tri calcium aluminate	12042-78-3	1–13
Tetra calcium alumino ferrite	12068-35-8	1–15
Magnesium oxide	1309-48-4	0.1–2.0
Calcium oxide	1305-78-8	0–3
Sodium salts	NA	0.1–0.7
Potassium salts	NA	0.1–1.0
Gypsum	13397-24-5	4–7
Ground granulated blast furnace slag	NA	0-65

This is a commercial product whose exact ratio of components may vary.

#### 4. First Aid

#### **General Information**

You should call the National Poisons Centre if you feel that you may have been harmed, burned or irritated by this product. The number is 0800 764 766 (0800 POISON) (24 hr emergency service). If medical advice is needed, have this SDS, product container or label at hand. If exposed or concerned: Get medical advice/ attention.

Recommended first aid

Ready access to running water is recommended. Accessible eyewash is recommended

facilities

**Exposure** 

Swallowed IF SWALLOWED: Do NOT induce vomiting. Rinse mouth. Contact a doctor if you feel

unwell.

Eye contact IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if

present and easy to do. Apply continuous irrigation with water for at least 15 minutes

holding eyelids apart. Immediately call a POISON CENTER or doctor.

Skin contact IF ON SKIN: Wash with plenty of soap and water. If skin irritation occurs: Get medical

advice/attention. Wash contaminated clothing before reuse.

Inhaled IF INHALED: If breathing is difficult, remove to fresh air and keep at rest in a position

comfortable for breathing. If patient is unconscious, place in the recovery position (on the

side) for transport and contact a doctor. If experiencing respiratory symptoms:

Immediately call a POISON CENTER or doctor.

#### **Advice to Doctor**

Treat symptomatically. See Section 11 for information on potential long term health effects from exposure to very fine crystalline silica dust.

### 5. Firefighting Measures

Fire and explosion hazards: Suitable extinguishing

There are no specific risks for fire/explosion for this chemical. It is non-combustible.

Not applicable.

substances:

Unsuitable extinguishing

substances:

Unknown.

Products of combustion: Product does not burn. Dust may form irritating atmosphere. Product will react

> exothermically with water. Contaminated water wil be strongly alkaline. Product may decompose in a fire and produce toxic or corrosive fumes.

Protective equipment:

Self-contained breathing apparatus. Safety boots, non-flammable overalls, gloves, hat

and eye protection.

Hazchem code: NA

## 6. Accidental Release Measures

Containment If greater than 1000kg (dust or dry mortar) is stored, secondary containment is required.

Emergency plans to manage any potential spills must be in place. Prevent spillage from

spreading or entering soil, waterways or drains.

**Emergency procedures** In the event of large spillage (>100kg) of the dry or wetted mixture alert the fire brigade to

> location and give brief description of hazard. Wear protective equipment to prevent skin, eye and respiratory exposure. Clear area of any unprotected personnel. Contain spill. Prevent by whatever means possible any spillage from entering drains, sewers, or water

courses.

Clean-up method Collect product avoiding any dust formation, and seal in properly labelled containers or

drums for disposal. If contamination of crops, sewers or waterways has occurred advise

local emergency services.

Mop up and collect recoverable material into labelled containers for recycling or salvage. Disposal

Recycle containers wherever possible. This material may be suitable for approved

landfill. Dispose of only in accord with all regulations.

**Precautions** The dust may form irritating atmosphere. Contaminated water will be strongly alkaline. Do

not allow contaminated water to enter the environment. Wear protective equipment to prevent skin and eye contamination and the inhalation of dust. Work up wind or increase

ventilation.

### 7. Storage & Handling

**Storage** Avoid storage of harmful substances with food. Store out of reach of children.

Containers should be kept closed in order to minimise contamination. Keep in a cool, dry

place. Avoid contact with incompatible substances as listed in Section 10.

Keep exposure to a minimum, and minimise the quantities kept in work areas. Minimise Handling

dust generation and accummulation. See section 8 with regard to personal protective equipment requirements. Avoid skin and eye contact and inhalation of dust.

8. Exposure Controls / Personal Protective Equipment

**Workplace Exposure Standards** 

A workplace exposure standard (WES) has not been established by WorkSafe NZ for this product. There is a general limit of 3mg/m³ for respirable particulates and 10mg/m³ for inhalable particulates when limits have not otherwise been established.

NZ Workplace	Ingredient	WES-TWA	WES-STEL
NZ Workplace Exposure Stds	Ingredient  Cement  Limestone Calcium sulphate hemihydrate Chromium oxide (Cr (VI) Chromium (III) Flyash Calcium oxide	WES-TWA  3mg/m³ 1mg/m³ (respirable) 10mg/m³ (as nuisance dust) 10mg/m³ (as nuisance dust) 0.00002mg/m³ 0.5mg/m³ See crystalline silica 2mg/m³	WES-STEL
	Aggregate Silica (all forms) titanium dioxide iron (III) oxide	See crystalline silica 0.05mg/m³ (as respirable dust) 10mg/m³ 5mg/m³ (as Fe)	- - -

**Safety Data Sheet** 

#### **Engineering Controls**

In industrial situations, it is expected that employee exposure to hazardous substances will be controlled to a level as far below the WES as practicable by applying the hierarchy of control required by the Health and Safety at Work Act (2015) and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016. Exposure can be reduced by process modification, use of local exhaust ventilation, capturing substances at the source, or other methods. If you believe air borne concentrations of mists, dusts or vapours are high, you are advised to modify processes or increase ventilation.

## **Personal Protective Equipment**

#### General

Personal Protective Equipment (PPE) should not be used as the primary means of exposure protection, except in the event of an accident or emergency situation or where all other means of protection have proven to inadequate.

Clean PPE after use or dispose of as appropriate. Store PPE for re-use in a clean place. Regular training on the correct use of PPE should be provided. In particular the correct fitting and use of respirators and where applicable the cleaning of respirators should be undertaken.

**Eyes** 

Protect eyes with goggles, safety glasses or full face mask. Avoid wearing contact lenses.

Skin

Avoid repeated or prolonged skin contact. Wear overalls, waterproof boots and impervious alkali-resistant gloves (e.g., nitrile, PVC, rubber, neoprene). Tuck overalls inside boots and seal with duct tape to reduce risk of mortar entering boots.

Remove protective clothing and wash exposed areas with soap and water prior to eating, drinking or smoking. Take special care to ensure that cuts/abrasions or irritated skin are not exposed to this product. It is also important to ensure that wet mortar does not become trapped within gloves, boots or clothing – leaving mortar in contact with the skin for extended period of time may cause skin burns.

It is important that skin is also covered when mortar dust is created (e.g., sanding, grinding, crushing or cutting mortar). The dust may also irritate and/or damage the skin.

Respiratory

To prevent irritation a well fitted dust mask should be used (this is not recommended when exposure is close to the WES). A fine particulate half or full face respirator with an effective seal is recommended when airborne concentrations approach the WES (section 8). If sanding, grinding, crushing or cutting mortar, it is possible that the silica dust WES will be exceeded hence a respirator will be required. If exposure to the concentrated aqueous solution, dust and mist is likely, a full face respirator with a particulate filter is recommended.

#### **WES Additional Information**

Air monitoring to measure the overall amount of silica dust created at various positions on the worksite and the maximum level of worker exposure (given the use of dust control methods, respirators and other measures) should be carried out on a regular bases or when new work methods or equipment is introduced. Air monitoring can be carried out by occupational hygienists or other trained personnel.

## 9. Physical & Chemical Properties

Appearance Grey powder
Odour bland
Odour Threshold no data

**pH** 11-13 (1% solution)

Freezing/melting point >1200°C
Boiling Point no data
Flashpoint no data
Flammability no data
Upper & lower flammable limits
Vapour pressure no data
Vapour density no data

Page 4 of 8 August 2023

Safety Data Sheet

Specific gravity/density

Solubility insoluble in hardened state, slightly soluble (<10g/L) in wet state to form alkaline solution.

Partition coefficient no data **Auto-ignition temperature** no data **Decomposition temperature** no data **Viscosity** no data

**Particle Characteristics** no data

## 10. Stability & Reactivity

Stability This product is unlikely to react or decompose under normal storage conditions. This

product will not undergo polymerisation reactions.

Conditions to be avoided Incompatible groups Substance Specific Incompatibility

Containers should be kept closed in order to avoid contamination. Strong acids.

Mortar dissolves in hydrofluoric acid producing corrosive silicon tetrafluoride gas. Silicates react with powerful oxidizers such as fluorine, chlorine, trifluorides, and oxygen

difluoride.

Hazardous decomposition

products

Does not readily decompose. Respirable dust particles may be generated when mortar is

sawed, drilled, sanded or grinded.

**Hazardous reactions** Will not polymerise

### 11. Toxicological Information

#### Summary

IF SWALLOWED: Ingestion of this product may cause gastrointestinal irritation.

IF IN EYES: Contact with dust can cause effects ranging from irritation to serious eye damage/burns and blindness. The pH of the wet mortar dust is >11. Note: the level of irritation/damage is dependent on the quantity of the dust, the pH, and the length of time exposed. E.g., if dust is washed out of the eye immediately, effects will be minor. However, if dust is left in contact with the eye, serious damage/blindness could result.

IF ON SKIN: Dust may cause irritation - particularly in hot conditions or when sweating. Brief exposure to the skin (i.e., washed off immediately) will result in irritation. However, if the mortar is left on the skin for an extended time (e.g., if inside boots or absorbed through overalls), burns to the skin are possible. Thickening of the skin and/or rash is also possible. IF INHALED: Short term (acute) silicosis can occur with one-off exposures to extremely high levels of fine crystalline silica dust. Other short term effects include irritation, choking and difficulty breathing.

CHRONIC EFFECTS: The dust does contain crystalline silica. Crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (IARC Group 1). The carcinogenicity of silica is related to long term (e.g., 10 years) inhalation of very fine particulate (e.g., from sand blasting or dry cutting of mortar/masonry/mortars). Carcinogenicity of silica appears linked to development of silicosis (see systematic below) followed by complications and, eventually lung cancer. In addition to silicosis there is some evidence that exposure to respirable crystalline silica may be linked to scleroderma and an increased risk of kidney disease.. This mixture may contain titanium dioxide, which is classed by IARC as group 2B.

#### **Supporting Data**

Skin

Acute Oral The estimated LD<sub>50</sub> (oral, rat) for the mixture is > 5,000 mg/kg. Ingestion of this product

may cause gastrointestinal irritation.

**Dermal** The estimated LD<sub>50</sub> (dermal, rat) for the mixture is > 5,000 mg/kg.

The estimated LC<sub>50</sub> (inhalation, rat) for the mixture is >5 mg/L (dust mist). Short term Inhaled

(acute) silicosis (see "systemic" below) can also occur with one-off exposures to extremely high levels of fine crystalline silica dust. Other short term effects include

irritation, choking and difficulty breathing.

Eye Mortar, is considered to be an eye corrosive. pH >11, if wetted. Dust may also be

irritating to eye (mechanical irritation) Mortar is considered a skin irritant.

Chronic Sensitisation There is evidence that chromium present in some cement mixtures may induce

occupational asthma and skin sensitisation (allergic reactions). This mixture contains less

than 0.01% hexavalent chromium and hence is not considered sensitising.

Mutagenicity No ingredient present at concentrations > 0.1% is considered a mutagen.

Carcinogenicity This mixture does contain crystalline silica. Crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (IARC Group 1). The

mixture triggers carcinogen cat 1 classification (confirmed carcinogen).

This mixture may contain titanium dioxide which has been classed by IARC as Group 2B,

(possibly carcinogenic to humans). The route of exposure for carcinogenicity is by

\* DRICON°

inhalation of fine particles of titanium dioxide.

**Reproductive** / No data for mixture is available. No ingredient present at concentrations > 0.1% is **Developmental** considered a reproductive or developmental toxicant or have any effects on or via

lactation.

Systemic The mixture is considered to be a target organ toxicant, because of the presence of

crystalline silica at greater than 1%. Crystalline silica triggers STOT RE cat 1 classification if it is in the form of a fine respirable dust in an occupational (chronic

exposure) setting.

Aggravation of existing conditions

Persons with existing lung conditions may be at a higher risk of further adverse health effects (as above). Smokers have an increased risk of lung cancer and silicosis.

## 12. Ecological Data

#### Summary

Mortar and mortar dusts are considered to be harmful in the environment when in a soluble form. This is primarily due to the high pH of the product. Lime dissolves in water to produce a highly alkaline solution that will burn and kill fish, insects and plants.

**Supporting Data** 

Aquatic No data for mixture is available. Using  $EC_{50}$ 's for ingredients, the estimated  $EC_{50}$  for the

mixture is between 1 and 100 mg/L. This implies that mortar should be considered harmful in the aquatic environment. Water contaminated with this product is alkaline and

should not be allowed to enter the environment.

Bioaccumulation Not applicable

**Degradability** Not applicable (predominantly natural products)

**Soil**No data available for the mixture. The soil toxicity value for the mixture is estimated to be

≥ 100 mg/kg.

Terrestrial vertebrate This product is not considered harmful to terrestrial vertebrates. No LC<sub>50</sub> (diet) data for

ingredients are available and the classification is based on the LD50 (oral) - see section

11 – oral toxicity.

Terrestrial invertebrate

Biocidal

The mixture is not considered harmful to terrestrial invertebrates.

Not designed as a biocide.

### 13. Disposal Considerations

**Restrictions** There are no product-specific restrictions, however, local council and resource consent

conditions may apply, including requirements of trade waste consents.

Disposal method

Disposal of this product must comply with the Hazardous Substances (Disposal) Notice
2017 and the requirements of the Resource Management Act for which approval should

be sought from the Regional Authority. The substance must be treated and therefore

rendered non-hazardous before discharge to the environment.

Contaminated packaging Disposal of contaminated packaging must comply with the Hazardous Substances

(Disposal) Notice 2017 clause 12. Ensure that the package is rendered incapable of containing any substance and is disposed in a manner that is consistent with the requirements of the substance it contained and the material of the package. If possible

reuse or recycle packaging.

## 14. Transport Information

Land Transport Rule: Dangerous Goods 2005 - NZS 5433:2007

There are no specific restrictions for this product (not a dangerous good).

### 15. Regulatory Information

This product is an approved substance under the Hazardous Substances and New Organisms Act (HSNO). Approval code: HSR002545: Construction Products (Carcinogenic) Group Standard 2020. All ingredients appear on the NZIoC.

#### **Specific Controls**

Packaging

Key workplace requirements are:

SDS To be available within 10 minutes in workplaces storing any quantity.

Inventory An inventory of all hazardous substances must be prepared and maintained.

All hazardous substances should be appropriately packaged including substances that have been decanted, transferred or manufactured for own use or have been

supplied

Labelling Must comply with the Hazardous Substances (Labelling) Notice 2017.

Emergency plan Required if > 1000kg is stored.

Certified handler Not required. Tracking Not required.

Bunding and secondary containment Required if > 1000kg is stored. Signage Required if > 1000kg is stored.

Location compliance certificate Not required. Flammable zone Not required. Fire extinguisher Not required.

Note: The above workplace requirements apply if only this particular substance is present. The complete set of controls for a location will depend on the classification and total quantities of other substances present in that location.

#### Other Legislation

In New Zealand, the use of this product may come under the Resource Management Act and Regulations, the Health and Safety at Work Act 2015 and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016, local Council Rules and Regional Council Plans.
